

**NAME**

`mmdir` — move a directory

**SYNOPSIS**

`/etc/mmdir` *dirname* *name*

**DESCRIPTION**

*Mmdir* renames directories within a file system. *Dirname* must be a directory; *name* must not exist. Neither name may be a sub-set of the other (`/x/y` cannot be moved to `/x/y/z`, nor vice versa).

Only super-user can use *mmdir*.

**SEE ALSO**

`mkdir(1)`
