Issue 1, 7/22/75
AT&TCo SPCS

KPRC(g)   **KPRC(g)**

NAME
> kprc — kernel process translation file

DESCRIPTION
> The *kprc* file is read by the *ps* program to translate single character process identifiers to device or controller names more suitable for human consumption.
> The first character of each line is the process identifier character (specified to *ldp* via the "id-char" keyword at process build time). The device name follows the id character; it may be separated from the identifier by a blank, tab, or comma.

FILES
> /mrt/kprc
